

Isolated Passive Inverse-RIAA Filter

Allows you to connect line level audio to the phono input of your ROWE/AMI Jukebox amplifier

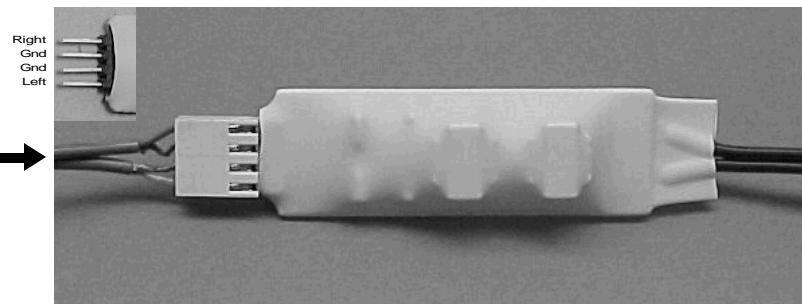

Works with any amplifier having magnetic phono inputs.

Disconnect the 4-pin phono cable from your record mechanism.

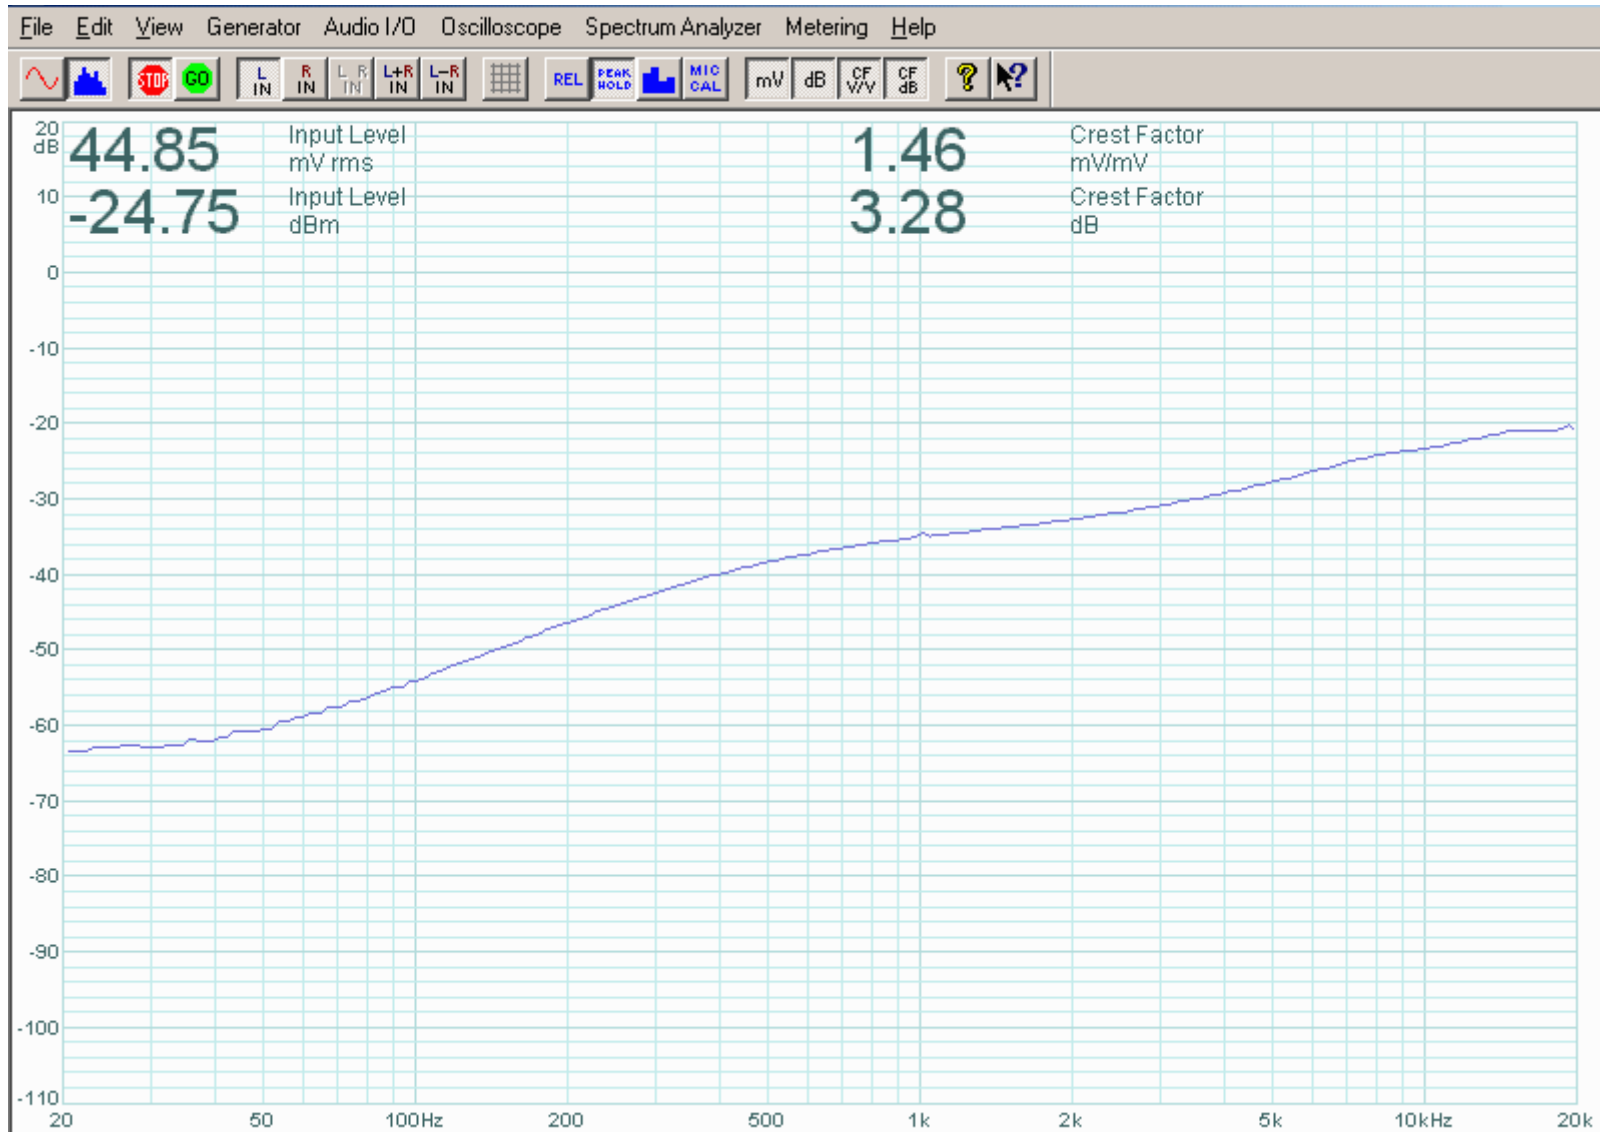

You may need to disconnect the turntable motor power or remove the drive belt then start a record play to un-mute the amplifier.

Plug the phono cable onto the 4-pin connector on the inverse-RIAA filter.

Connect the male RCA plugs to the line out on your CD changer or MP3 player.

Inverse-RIAA Equalization Curve
 Input signal: Sine wave sweep, 20 to 20,000 Hz at 0dB
